Test Plan

Project Name: Travel Hub-Online Booking & Reservation

Prepared By: Banashry Adak

Testing Type: Manual Functional testing

Methodology: Agile Scrum

Tool Used: Jira

1. Objectives

The objective of this test plan is to define the testing strategy, scope, and approach for validating the functionality of the Travel Hub – Online Booking & Reservation system.

2. Scope of Testing

The following modules are included in testing:

- Registration
- Login
- Logout
- Room Reservation
- Flight Ticket Booking
- Attractions
- Payment
- Profile Management

Only manual functional testing is covered. Non-functional testing such as performance or security testing is not included.

3. Test Strategy

- Manual functional testing will be performed.
- Test cases will be written and managed in **Jira**.
- Defects will be logged and tracked using **Jira Issue Tracking**.
- Testing will follow **Agile Scrum methodology**.

4. Test Approach

- Test cases were designed based on **user stories and acceptance criteria defined in Jira**.
- Manual functional testing was performed for all major modules of the system.
- Testing was executed **sprint-wise following Agile Scrum methodology**.
- Regression testing was performed after defect fixes to ensure existing functionality was not affected.
-

5. Test Environment

- Browser: Google Chrome
- Operating System: Windows 10 / 11
- Internet Connection required

6. Test Deliverables

The following artifacts will be produced during testing:

- Test Plan
- Test Cases
- Bug report
- Test Closure Report

7. Entry Criteria

Testing will start when:

- User stories are available in Jira
- Test Cases are prepared

8. Exist Criteria

Testing will end when:

- All planed Test cases are executed
- Critical defects are fixed and documented
- Test Closure report is prepared

9. Risk and Mitigation

Risk	**Mitigation Strategy**
Test environment may not be available when required	Coordinate with the development team to ensure environment readiness before test execution
Limited testing time within sprint cycles	Prioritize critical and high-risk test scenarios
High number of defects may delay testing	Perform continuous defect tracking and quick retesting after fixes
Changes in requirements during sprint	Update test cases and revalidate affected modules
